Purification of Drinking Water and Treatment of Municipal and Industrial Wastewater

Ozone treatment technologies are indispensable to various manufacturing processes and to water treatment in both the public and industrial sectors.

SPP's line of highly efficient ozone generators includes both air-cooled and water-cooled models of various sizes. We also supply compact treatment systems with optimum combinations of devices for powerful ozone treatment of swimming pools, aquariums, and recycled wastewater from buildings.

SPP has established a Water Technology Center for R&D and demonstration testing of ozone treatment and related technologies. This commitment demonstrates our ability to offer individualized water treatment solutions for each client and contributes to the development of new ozone utilization technologies.

The advanced oxidation process (AOP) employing ozone is being applied to the decomposition of environmental endocrine disruptors and persistent organic compounds. Clearly, ozone is being used with confidence for an increasing number of essential applications.
